Patent No. 5712369

GENERAL INFORMATION:
APPLICANT: Simpson, Richard J.; Welt, Sydney; Ritter, Gerd;
APPLICANT: Simpson, Richard J.; Nice, Edouard; Moritz, R. L.;
APPLICANT: Statinel, B.; J.; Hong; Burgess, Anthony W.;
APPLICANT: Getinel, B.; J.; Hong; Burgess, Anthony W.;
APPLICANT: Good Cell and Colon Cancer Cell
TITLE OF INVENTION: Colon Cell And Colon Cancer Cell
TITLE OF INVENTION: Associated Nucleic Acid Molecules, Protein And Peptides
NUMBER OF SEQUENCES: 29
CORRESPONDENCE ADDRESS:
ADDRESSEE: Felfe & Lynch
STREET: 805 Third Avenue
CITY: New York City
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             59 GD-FKNR-----AEMIDFNIRIKNVTRSDAGKYRCEVSAPSEQGQNLEEDT---VTLEV 108

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 30, A sequence 30, A sequence 2, A Sequence 2, A Sequence 76, A Sequence 64, Sequence 6

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A;Title: A novel brain-derived member of the epidermal growth factor family that interact A;Accession: JC5701
A;Accession: JC5701
A;Molecule type: mRNA
A;Residues: 12868 + HIG-
A;Accession: PC4411
A;Accession: PC4411
A;Accession: PC4411
A;Accession: PC4412
Cioamental source: PC-12 cell
C;Comment: This protein is a member of the epidermal growth factor family. It is functic ating the differentiation of MDA-MB-453 cells.
C;Superfamily: human BrbB kinase activator alpha, brain and thymus; EGF homology; immuno F;361-397/Domain: EGF homology eEGF>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         æ

"Towards a catalog of human genes and proteins: sequencing and analysis of 500 novel complete protein coding human cDNAs.";

"Towards a catalog of human genes and proteins: sequencing and analysis of 500 novel complete protein coding human cDNAs.";

"Towards a catalog of human genes and proteins sequencing and recruits PARD3. The association of the PARO6-PARD3 complex may prevent the interaction of PARD3 with JAM1, thereby preventing recruits PARD3. The association of the PARO6-PARD3 complex may prevent the interaction of PARD3 with JAM1, thereby preventing right junction assembly (By similarity). Plays a role in regulating monocyte transmigration involved in integrity of epithelial barrier. Involved in platelet activation.

-1- SUBUNIT: Interacts with the first PDZ domain of PARD3. The association between PARD3 and PARD6B probably disrupts this interaction (By similarity).

-1- SUBCELLULAR LOCATION: Type I membrane protein (Potential).

-1- SUBCELLULAR LOCATION: Type I membrane protein (Potential).

-1- SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERPAMILY.

-1- SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERPAMILY.

"X-ray structure of junctional adhesion molecule structural basis for homophilic adhesion via a novel dimerization motif.";

EMBO J. 20:4391-4398 (2001).

-1- FUNCTION: Seems to plays a role in epithelial tight junction recruites PARD: The association of the PARDs and recruites PARD: The association of the PARDs and the PARDs complex may prevent the interaction of PARD3 with JAM1, thereby preventing tight junction assembly. Plays a role in regulating monocyte transmignation involved in integrity of epithelial barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Simmons D., Dejana E.; "Junctional adhesion molecule, a novel member of the immunoglobulin superfamily that distributes at intercellular junctions and modulates

SUBUNIT: Interacts with the first PDZ domain of PARD3. The association between PARD3 and PARD6B probably disrupts this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ebnet K., Suzuki A., Horikoshi Y., Hirose T., Meyer zu Brickwedde M.-K., Ohno S., Vestweber D.; "The cell polarity protein ASIP/PAR-3 directly associates with junctional adhesion molecule (JAM)."; EMBO J. 20:3738-3748(2001).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TISSUE SPECIFICITY: Localized at tight junctions of both epithelial and endothelial cells.
SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY.
SIMILARITY: Contains 2 immunoglobulin-like V-type domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      X-RAY CRYSTALLOGRAPHY (2.5 ANGSTROMS) OF 212-238

Biophys. Res. Commun. 236:682-686(1997).
FUNCTION: MAY PLAY A ROLE IN CELL-CELL RECOGNITION AND SIGNALING.
SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: EXPRESSED IN NORMAL GASTROINTESTINAL
EPITHELIUM AND IN 95% OF COLON CANCERS.
PTM: N-GLYCOSYLATED, CONTAINS APPROXIMATELY 8 KDA OF N-LINKED
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

Submitted (APR-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Structural component of the muscle M-line. Myofilament
lattice assembly begins with positional cues laid down in the
basement membrane and muscle cell membrane. UNC-89 responds to
these signals, localizes, and then participates in assembling an
M-line.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE=96180279; PubMed=8603916; Benian G.M., Tinley T.L., Tang X., Borodovsky M.; Tinley T.L., Tang X., Borodovsky M.; The Caenorhabditis elegans gene unc-89, required for muscle M-line assembly, encodes a giant modular protein composed of Ig and signal transduction domains.";

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8
                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
TISSUE SPECIFICITY: Localizes to the middle of A-bands.
SIMILARITY: Contains 1 DBL-homology (DH) domain.
SIMILARITY: Contains 1 fibronectin type III domain.
SIMILARITY: Contains 49 immunoglobulin-like C2-type domains.
SIMILARITY: Contains 1 PH domain.
SIMILARITY: Contains 5 RCSD domains.
SIMILARITY: Contains 1 SH3 domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             EMBL; U33058; AABO0542.1;

Quinn T.P., Peters K.G., de Vies C., Ferrara N., Williams L.T.,
"Fetal liver kinase 1 is a receptor for vascular endothelial growth
factor and is selectively expressed in vascular endothelium.";
Proc. Natl. Acad. Sci. U.S.A. 90:7533-7537(1993).
-!- FUNCTION: RECEPTOR FOR VEGF OR VEGF-C. HAS A TYROSINE-PROTEIN
KINASE ACTIVITY. THE VEGF-KINASE LIGNAD/RECEPTOR SIGNALING SYSTEM
PLAYS A KEY ROLE IN VASCULAR DEVELOPMENT AND REGULATION OF
VASCULAR PERMEABILLITY.

CATALITIC ACTIVITY: APP + a protein tyrosine = ADP + protein tyrosine phosphate.

tyrosine phosphate.

SUBCELLULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: EXPRESSED AT HIGH LEVELS IN ADULT HEART, LUNG, KIDNEY, BRAIN AND SKELETAL MUSCLE, BUT IS ALSO EXPRESSED AT LOWER SIMILARITY: BELONGS TO THE CSF-1/PDGF RECEPTOR FAMILY OF TYROSINE-PROTEIN KINASES.

This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch). SIMILARITY: Contains 7 immunoglobulin-like C2-type domains.

J. Biol. Chem. 272:26883-26086(1997).
-! FUNCTION: May play important roles in selective fasciculation and zone-to-zone projection of the primary olfactory axons.
-!- SUBCELLULAR LOCATION: Type I membrane protein (long isoform) and attached to the membrane by a GPI-anchor (short isoform).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TISSUE SPECIFICITY: EXPRESSED IN SUBSETS OF BOTH OLFACTORY AND TISSUE SPECIFICITY: EXPRESSED IN SUBSETS OF BOTH OLFACTORY AND VOMERONASAL NEURONS IN A ZONE-SPECIFIC MANNER. SIMILARITY: BELONGS TO THE INMUNOSLOBULIN SUPERFAMILY. SIMILARITY: Contains 5 immunoglobulin-like C2-type domains. SIMILARITY: Contains 2 fibronectin type III domains.

PUNCTION: DIRECT LIGAND FOR ERBB3 AND ERBB4 TYROSINE KINASE RECEPTORS. CONCOMITANTLY RECRUITS ERBB1 AND ERBB2 CORECEPTORS, RESULTING IN LIGAND-STIMULATED TYROSINE PHOSPHORYLATION AND ACTIVATION OF THE ERBB RECEPTORS, MAY ALSO PROMITE THE HETERODIMERIZATION WITH THE EGF RECEPTOR. SUBCELLULAR LOCATION: EXISTS AS AN TYPE I MEMBRANE PROTEIN AND AS A PROTECLYTICALLY RELEASED SOLUBLE GROWTH FACTOR FORM. THE MYMBRANE-BOUND FORM DOES NOT SEEM TO BE ACTIVE (BY SIMILARITY).
